COMPANION DOCUMENT

This Extended CV accompanies the two-page résumé and provides the full publication, patent and career record behind it. Portfolio total: 8 peer-reviewed journal articles, 4 industry/technical journal articles, ~50 conference papers, 2 preprints, 1 doctoral thesis, 26 granted patents (11 pending), and 444 citations (h-index 11, i10-index 10; Google Scholar, September 2026).

CAREER ARC

Phase I — Theoretical & computational photonics (KAUST, 2009–2014). Founding cohort member of the KAUST Photonics Master's programme; M.S. (2010) and PhD (2014) in Electrical Engineering under Prof. Boon S. Ooi. Work centred on light propagation in heterogeneous, nonlinear and time-varying media — computational electromagnetics, beam shaping and chalcogenide-glass material engineering. Thesis: *Exploring Heterogeneous and Time-Varying Materials for Photonic Applications, Towards Solutions for the Manipulation and Confinement of Light* (KAUST, 2014).

Phase II — Applied laser–matter interaction (Saudi Aramco, 2015–2019). Transition from theory to industrial application: numerical modelling of laser–rock and electromagnetic–rock interaction, thermal/geomechanical coupling, and the early laser-perforation programme. First-author work established the physics models underpinning the technology.

Phase III — Technology deployment & diversification (2020–present). Co-PI on Aramco's high-power laser programme with Sameeh I. Batareseh, carrying the technology from laboratory demonstration to first industrial field deployment. In parallel, opened three new research lines: hydrogen-sulfide valorisation and solar fuels; photonic and machine-learning sensing for subsurface and surface assets; and hollow-core optical fibre for kilowatt-class downhole power delivery.

ACHIEVEMENT CLUSTERS

High-power laser technology: laboratory to first industrial deployment

The defining programme of the career, documented continuously in the peer-reviewed and industry record over a decade:

- **Physics & modelling foundation (2016–2019)** — first-authored the governing numerical treatments of laser–rock interaction (ARMA-2016-142), thermal/geomechanical dynamics of electromagnetic heating (SPE-183917-MS, SPE-188790-MS), and a scalable numerical solution for subsurface wave propagation (SPE-194888-MS, sole author). The coupled thermal–mechanical model was published in *SPE Journal* (2019).
- **Technology maturation (2019–2022)** — laser perforation as a completion technology (SPE-197192-MS), performance in carbonates and organic-rich shales (SPE-197480-MS; SPE-204809-MS, first author), laser drilling in extremely hard formations (OTC-30416-MS), and laser cladding for corrosion prevention (SPE-201617-MS).
- **First field deployments (2021–2024)** — first industrial flowline-descaling deployment (Dec. 2021; SPE-209972-MS), underlying principles first-authored (SPE-209977-MS); first industrial high-power laser perforation deployment (SPE-215016-MS, 2023) and its field validation (SPE-220900-MS, 2024).
- **Extension & scale-up (2023–2025)** — laser drilling milestones (SPE-215166-MS), photonic–hydraulic hybrid fracturing lowering breaking pressure (SPE-216510-MS, SPE-215162-MS), a long-range descaling robot (SPE-222608-MS), sweet-spot creation in tight/unconventional reservoirs (SPE-227837-MS, 2025), and net-zero reframing of the programme (SPE-224865-MS, 2025).

Hollow-core optical fibre for kilowatt-class power delivery

Co-inventor with the University of Southampton Optoelectronics Research Centre (Poletti/Richardson group) on nested anti-resonant nodeless fibre (NANF) and corrugated-cladding fibre enabling multi-kilowatt continuous-wave transmission at 1050–1100 nm over the distances required for downhole delivery — the enabling physical layer for the laser programme above (US 11,555,958 B2 + EP 4,067,952 B1; US 11,585,976 B2 + EP 4,067,735 A1 + SA 122,430,881 B1).

Hydrogen sulfide valorisation and solar fuels

A sustainability research line combining peer-reviewed publication with a protected IP position — converting a waste stream into hydrogen rather than elemental sulfur: senior-author perspective in *Advanced Energy and Sustainability Research* (2023, with the KAUST Laquai group); UV-induced decomposition pathways in *RSC Advances* (2025, up to 52% conversion within 60 minutes); and a patent cluster spanning photocatalytic conversion (US 12,559,366 B2, lead inventor), dissociation via reactive sulfur species (US 12,459,816 B2), photolytic conversion in produced-gas streams (US 2024/0060411 A1), and steam-methane reforming (US 2025/0368507 A1).

Photonic and machine-learning sensing

A coherent programme applying optics, spectroscopy and machine learning to characterisation and monitoring: subsurface property inference from early ML applications (SPE-195118-MS, 2019, first author) to hyperspectral multiphysics inference (SPIE, 2023, first author), protected in US 12,682,216 B2 (sole inventor) and US 12,487,075 B2; asset monitoring and computer vision (IPTC-23632-MS; US 12,430,795 B2; US 11,725,504 B2, five-jurisdiction family; the 2026 wellhead-displacement trio using beam deflection, speckle reflectometry and shadowgraphy); emissions/sustainability (US 12,394,183 B2); and chemical/fibre sensing (US 11,867,629 B2; US 12,253,459 B2; US 12,359,554 B2; US 2024/0141777 A1).

Theoretical physics and computational electromagnetics

The scientific foundation of the career: optical analogues of gravitational attractors (*Optics Express*, 2013, first author — the most-cited work, featured in *Laser Focus World*, July 2013); Bessel–Gauss beam shaping from heterogeneous refractive-index maps (*JOSA A*, 2012, first author); electron-irradiation-induced permittivity reduction in chalcogenide glass (*J. Appl. Phys.*, 2013, first author); a high-order finite-volume method for Maxwell's equations in time-varying media (arXiv:2307.11842, first author, with D. I. Ketcheson, 2023); and a revisitation of the quantum beam splitter without a vacuum state (*Rev. Mex. Fís. E*, 2022).

PROFESSIONAL EXPERIENCE — FULL RECORD

Applied Physicist — Co-PI, High-Power Laser Programme

2015 – Present · Upstream Advanced Research Center, Saudi Aramco, Dhahran, KSA

Co-leads the physics, modelling and field-execution programme for high-power laser technology; see Achievement Clusters for the full technical narrative. Opened and now leads three additional research lines: hydrogen-sulfide valorisation, photonic/ML sensing, and hollow-core fibre power delivery.

Graduate Researcher, Photonics Laboratory

2009 – 2014 · KAUST, Thuwal, KSA · Advisor: Prof. Boon S. Ooi

Founding member of the KAUST Photonics Master's programme. Co-founder and lead developer of the *Maxwell-GEMS* project (Maxwell Generalized ElectroMagnetic Solvers) — a toolbox (FEM, FDTD, spectral and paraxial methods) for wave propagation in heterogeneous, anisotropic, non-linear and time-varying media.

Early Research Fellowships

2006 – 2009 · Mexico, United States, Spain

- **Junior Research Fellow**, Advanced Optics Laboratory, College of Sciences, UNAM (Sept. 2006 – Aug. 2009) — experiments in quantum optics; developed a measurement strategy for concurrent triple coincidences and theory on properties of vacuum states. Supervisor: Víctor M. Velázquez.
- **Research Fellow**, Joint Quantum Institute, Atomic and Molecular Optics Laboratory, University of Maryland at College Park (Mar. – Sept. 2007) — development of a laser control system for quantum-state measurement and preparation. Supervisor: Luis Orozco.
- **Research Fellow**, Institut de Ciències Fotòniques (ICFO), Spain (Mar. – Oct. 2008) — development of a fast polarimetry system and density-function measurement device for quantum-state characterisation. Supervisor: Morgan Mitchell.

EDUCATION

DEGREE	INSTITUTION	DATES
--------	-------------	-------

PhD, Electrical Engineering (Photonics) — Thesis: <i>Exploring Heterogeneous and Time-Varying Materials for Photonic Applications, Towards Solutions for the Manipulation and Confinement of Light</i>	KAUST, Saudi Arabia	2011 – 2014
M.S., Electrical Engineering (Photonics)	KAUST, Saudi Arabia — Founding cohort	2009 – 2010
Licenciatura (B.S.), Physics — GPA 9.67/10	Universidad Nacional Autónoma de México (UNAM)	2003 – 2009

COLLABORATION NETWORK

COLLABORATOR(S)	INSTITUTION	DOMAIN
Sameeh I. Batareseh	Saudi Aramco	High-power laser downhole technology (principal long-term collaborator)
Boon S. Ooi, Tien Khee Ng	KAUST Photonics Lab	Photonics, nanostructures, computational electromagnetics
Francesco Poletti, David Richardson, Hesham Sakr	University of Southampton ORC	Hollow-core anti-resonant optical fibre
Frédéric Laquai, Jan Kosco	KAUST	Photocatalysis, solar fuels
Aamir Farooq	KAUST	Combustion and H ₂ S photochemistry
David I. Ketcheson	KAUST	Numerical analysis, high-order methods
Jennifer L. Miskimins, Ramona M. Graves	Colorado School of Mines	Perforation / laser–rock interaction modelling
Adrian Cavazos Sepúlveda, Weichang Li, Yong Ma, José O. Álvarez	Saudi Aramco	Sensing, computer vision, chemical fingerprinting

Granted (26)

US 12669403 B2 + Sibling applications: US 2026/0029227 A1 (speckle reflectometry); US 2026/0028895 A1 (shadowgraphy) — Measuring wellhead displacement using beam deflection (2026)

US 12590836 B2 + Pre-grant publication US 2024/0377249 A1 — Optical energy apparatus, systems, and methods (2026)

SOLE INVENTOR

US 12559366 B2 + Pre-grant publication US 2024/0327211 A1 — Photocatalytic conversion of hydrogen sulfide to hydrogen (2026)

LEAD INVENTOR

US 12682216 B2 + Pre-grant publication US 2024/0361264 A1 — Method and system for predicting properties of rock samples using thermal sensing and machine learning (2025)

SOLE INVENTOR

US 12487075 B2 + Pre-grant US 2025/0327656 A1; sibling application US 2025/0327399 A1 — Characterizing rock properties with optical energy sources in a wellbore (2025)

US 12459816 B2 + Pre-grant US 2024/0059564 A1; continuation US 2026/0035245 A1 — Hydrogen sulfide dissociation using reactive sulfur species (2025)

US 12430795 B2 + Pre-grant US 2024/0331190 A1 — Automated wellhead monitoring using imaging and computer vision (2025)

US 12394183 B2 + Pre-grant US 2024/0177457 A1 — Generating training samples via 3D modeling for greenhouse gas emission detection (2025)

US 12359554 B2 + Pre-grant US 2022/0290553 A1 — Real-time multimodal radiometry for subsurface characterization during high-power laser operations (2025)

US 12253459 B2 + Pre-grant US 2023/0100258 A1 — In-situ monitoring of chemical fingerprints in oilfield applications (2025)

US 12181418 B2 + Pre-grant US 2024/0142383 A1 — System and method for in-situ probing of a conduit (2024)

US 12181406 B2 + Pre-grant US 2024/0201079 A1 — Contactless measurement of rock wettability by photonic techniques (2024)

US 12140850 B2 + EP 4118301 B1; WO 2021/181144 A1; CN 115552096 B; SA 522440458 B1 (priority 2020-03-11) — Reconfigurable optics for beam transformation (2024)

LEAD INVENTOR · 4-JURISDICTION FAMILY

US 12029125 B2 + Related family member US 11611029 — Methods to harvest thermal energy during subsurface high power laser transmission (2024)

US 11905778 B2 — Downhole laser tool and methods (2024)

US 11867629 B2 — 4D chemical fingerprint well monitoring (2024)

US 11852005 B2 — Deformation monitoring mechanism with multi-pixel angle-sensitive laser ranging (2023)

US 11725504 B2 + WO 2022/251833 A1; CA 3220011 A1; EP 4348176 A1; JP 2024-520436 A. Pre-grant US 2022/0372868 A1 — Contactless real-time 3D mapping of surface equipment (2023)

LEAD INVENTOR · 5-JURISDICTION FAMILY

US 11619097 B2 — System and method for laser downhole extended sensing (2023)

US 11604323 B2 — Methods to harvest electromagnetic energy during subsurface high power laser transmission (2023)

US 11585976 B2 + EP 4067735 A1; SA 122430881 B1 (granted 2024-06-09). Pre-grant US 2022/0317365 A1. No WO/CN/JP/CA member. — Optical fiber with corrugations (2023)

WITH UNIVERSITY OF SOUTHAMPTON

US 11555958 B2 + EP 4067952 A2 / EP 4067952 B1 (granted approx. 2024-12-11). Pre-grant US 2022/0317369 A1. — Nested anti-resonant nodeless optical fiber and subsurface system using the same (2023)

WITH UNIVERSITY OF SOUTHAMPTON

US 11378503 B2 — Numerical modeling of laser perforating process (2022)

US 10738579 B2 + US 10731450 B2; MA 52686 A (Morocco); EP 3797206; WO 2020/021321 — Methods of using a laser-induced plasma tool (2020)

US 10731450 B2 + US 10738579 B2; MA 52686 A (Morocco); EP 3797206; WO 2020/021321. Pre-grant US 2020/0032635 A1 — Laser-induced plasma tool (2020)

US 10365537 B1 — Directional sensitive fiber optic cable wellbore system (2019)

Pending applications (11)

US 2026/0029227 A1 + Sibling of US 12669403 B2 (beam deflection) and US 2026/0028895 A1 (shadowgraphy) — Measuring wellhead displacement using speckle reflectometry

US 2026/0028895 A1 + Sibling of US 12669403 B2; US 2026/0029227 A1 — Measuring wellhead displacement using shadowgraphy

US 2026/0035245 A1 + Continuation of US 12459816 B2 — Hydrogen sulfide dissociation using reactive sulfur species (continuation)

US 2025/0368507 A1 — Steam-methane reforming in hydrogen production

US 2025/0327399 A1 + Sibling of US 12487075 B2 — Determining wellbore displacement with optical energy sources in a wellbore

US 2025/0214869 A1 — Processing a fluid emulsion

US 2024/0309705 A1 — Downhole high-power laser tool for subsurface applications

US 2024/0141777 A1 — Distributed fiber sensing in a packer for permanent casing and formation deformation monitoring

US 2024/0084695 A1 — Casing deformation monitoring

US 2024/0060411 A1 — Photolytic conversion of hydrogen sulfide in a gas mixture produced by a hydrocarbon producing well and/or a gas treatment unit

US 2022/0351037 A1 — Method and system for spectroscopic prediction of subsurface properties using machine learning

All patents assigned to Saudi Arabian Oil Company, except the hollow-core-fibre family (co-assigned with the University of Southampton). Jurisdiction families are consolidated to a single entry; component numbers (EP/WO/CA/CN/SA/JP/MA) are noted where applicable.

AWARDS & HONORS

- **2026** — Finalist, Best Pipeline Rehabilitation Technology (Gulf Energy Information Excellence Awards (e2 Awards)): High-Power Laser Descaler Technology for Surface Flowlines — Team/technology recognition; not an individual award.
- **2026** — Finalist, Best Controls, Instrumentation & Automation Technology – Upstream (Gulf Energy Information Excellence Awards (e2 Awards)): WATCH: Wellsite Asset Tracking for Control of Hazards — Team/technology recognition; not an individual award.
- **2022** — Winner, CEO Excellence Award (Saudi Aramco)
- **2010** — Winner, Academic Excellence Award (King Abdullah University of Science and Technology)
- **2009** — Winner, Provost Award (King Abdullah University of Science and Technology)
- **2008** — Winner, Discovery Scholar (King Abdullah University of Science and Technology)
- **2008** — Winner, Research Scholarship (Caixa Catalunya – Institut de Ciències Fotòniques (ICFO))
- **2008** — Winner, PAPIIME Research Scholarship (UNAM)
- **2007** — Winner, REU Research Scholarship (University of Maryland)

MEDIA & CORPORATE RECOGNITION

- **2023** — Saudi Aramco Laser Research Team recognition by SVP Waleed A. Al-Mulhim (The Arabian Sun / Aramco Life): Recognition for the first industrial high-power laser perforation field trial.
- **2013** — Optics Express paper featured in trade press (Laser Focus World (July 2013)): Coverage of 'A possible approach on optical analogues of gravitational attractors' (Opt. Express 21, 8298).

PROFESSIONAL AFFILIATIONS & LEADERSHIP

- Member — IEEE (2010) · American Physical Society (2011) · Optica (OSA) (2012) · SIAM (2012) · Sociedad Mexicana de Física (2012) · The Competitiveness Institute (2012)

- **2009** — Founding Scholar & Founding Chair, KAUST Graduate Student Council: King Abdullah University of Science and Technology
- **2012–2013** — Vice-President, KAUST Graduate Student Council: King Abdullah University of Science and Technology — Governance liaison between administration, staff and the student body.
- **2013–** — Co-founder & lead developer, Maxwell-GEMS: Open numerical toolbox for electromagnetic wave propagation (FEM, FDTD, spectral, paraxial methods)

ADDITIONAL SKILLS & CERTIFICATIONS

Languages: Spanish (native), English (fluent), French (working).

Technical certifications: Laser Safety; Laboratory Safety; Clean-room Laboratory Safety. Trained and certified user of Scanning Electron Microscopy (SEM), Focused Ion Beam (SEM-FIB), Pulsed Laser Deposition (PLD), electron-beam deposition, and Raman/photoluminescence spectroscopy.

Software & languages: MATLAB, Python, Fortran, C, LaTeX, PETSc; COMSOL, Mathematica, RSoft, OriginLab; FEM, FDTD, Spectral / paraxial methods, Inverse-problem design.
